These displays can be arranged in various configurations, including, but not limited to: (1) A single, unified 3x3 grid, functioning as one large display, (2) 3 vertical 1x3 columns, where each column acts as an individual display, and (3) 3 horizontal 3x1 rows, where each row functions as an individual display. Additionally, the video wall should allow for other permutations and flexible configurations based on the specific needs of the operation. It is essential that the display quality is high, as the video wall will be used to showcase critical content such as detailed graphs, geographic maps, and high-definition (HD) images. Clarity and sharpness are paramount to ensure that all information is easily visible and accurately presented. All control functionalities must be centralized within the control room. No control devices or equipment should be located in the display area to maintain a clutter-free environment. Refer to the provided diagram for further details on control room layout and equipment placement.
